Professional Summary

CKA-certified DevOps Engineer with 3 years of experience architecting and operating cloud-native infrastructure on AWS for enterprise-scale platforms. 3× Elevance Health Impact Award recipient managing 100+ Linux servers, 13+ applications, and 200+ Tomcat instances across Amazon EKS and hybrid environments. Expert in Kubernetes orchestration, Infrastructure as Code (Terraform), CI/CD automation, and GitOps workflows. Delivered 85% reduction in maintenance downtime and 40% compute optimization through containerization and automation. Proven track record in site reliability engineering, disaster recovery, and zero-downtime production deployments.

Professional Experience

Carelon Global Solutions (Elevance Health)

July 2023 – Present

Software Engineer – DevOps & Platform Engineering

Hyderabad, India

- Architected and executed **containerization of 20+ Pega microservices** across 6 environments (Dev to Production), **migrating from on-premises Tomcat to Amazon EKS** using Helm charts and Kubernetes manifests, achieving 40% reduction in compute utilization and cutting deployment time from hours to minutes.
- Designed and implemented **Blue-Green deployment strategy** with Amazon EKS across multi-AZ architecture using Route-53 weight based traffic shifting and Kubernetes deployments, **reducing planned maintenance downtime by 85%** and enabling **zero-downtime production releases**.
- Led end-to-end Pega Infinity **platform upgrade** (v8.8 to v24.1) across 6 environments coordinating database migrations and application deployments, achieving **zero data loss, 99.9% platform availability**, and zero P1 incidents post-go-live.
- Developed comprehensive **Jenkins CI/CD pipelines and Ansible automation playbooks** to orchestrate Tomcat server lifecycle operations across 40+ servers and 80+ Tomcat instances, **eliminating 42 hours/week** of manual operations for 13-member team.
- Designed and maintained **multi-stage Jenkins CI/CD pipelines** integrating Bitbucket SCM, Podman container runtime, and Quay container registry, standardizing deployments across all 6 environments with automated testing and security scanning.
- Built and deployed **FastAPI backend and React frontend services on Amazon EKS with Jenkins and Argo CD GitOps pipelines** for AI-backed applications integrated with AWS Bedrock services, implementing automated scaling.
- Engineered **disaster recovery simulations** and comprehensive operational runbooks for EKS production workloads with defined RTO/RPO targets, maintaining **100% failover success rate** across all critical services.
- Operate and maintain infrastructure for 13+ enterprise applications across **100+ Linux servers** and **200+ Tomcat instances**, spanning Amazon EKS (5 applications) and on-premises environments with 99.9% uptime SLA.
- Developed automation tools using Python and Bash for **SSL/TLS certificate lifecycle management** across **100+ servers** and load balancers, reducing certificate-related production incidents and ensuring security compliance.

Technical Skills

Cloud Platforms: AWS (EKS, EC2, ECR, S3, IAM, VPC, ALB, Route 53, RDS, CloudWatch, Secrets Manager)

Container Orchestration: Kubernetes (EKS, OpenShift), Docker, Podman, Helm, Kustomize, Kubernetes RBAC, Network Policies

Infrastructure as Code: Terraform, Ansible

CI/CD & GitOps: Jenkins, GitHub Actions, Argo CD, Git, Bitbucket, Quay Container Registry, GitOps Workflows

Monitoring & Observability: Splunk, Datadog, AppDynamics, CloudWatch

Security & Compliance: IRSA, IAM Policies, TLS/SSL Management

Scripting & OS: Python, Bash/Shell Scripting, Linux

Certifications & Awards

Certified Kubernetes Administrator (CKA)	2025 (Valid through 2027)
3× Elevance Health Impact Award — Caelon Global Solutions	2024 · 2025
Recognized for exceptional contributions to platform reliability, infrastructure automation excellence, and zero-downtime delivery of mission-critical platform upgrades.	

Capstone Projects

QR Code Generator – Cloud-Native DevOps Platform	github.com/rohit-kandulapati/devops-qr-code
Provisioned complete AWS infrastructure using Terraform (EKS, VPC, IAM), implemented microservices deployment with Helm and Argo CD GitOps workflows, GitHub Actions CI/CD automation, and IRSA for secure pod-level S3 access.	
Kafka KRaft – Production-Ready Containerized Streaming Platform	github.com/rohit-kandulapati/kafka-kraft-alpine
Engineered minimal Alpine-based Kafka container using ZooKeeper-free KRaft mode, deployed as 3-node StatefulSet on Kubernetes with persistent storage to validate event-streaming architecture for Pega Infinity 25 upgrade readiness.	

Education

Bachelor of Technology – Electrical & Electronics Engineering	2023
Sagi Rama Krishnam Raju Engineering College, Bhimavaram, Andhra Pradesh
